

Outlook™ and iMIS Integrated

iEmail integrates Outlook™ with iMIS.

- Searches **iMIS** directly from Outlook™ using multiple fields, adhocs, committees, events, custom views and even IQA queries!
- Inserts both sent and received emails, including attachments, into **iMIS** as activities
- Synchronizes tasks between **iMIS** and Outlook™
- Allows **iMIS** end users to create appointments that appear in Outlook™
- Supports numerous security and configuration options via Access Keywords

“We love iEmail! With just a click of the **iMIS** button, we can send emails to committees, event registrants, etc. and we no longer have to query and export names or keep a separate contact list in Outlook™. It has saved us so much time!”

Brenda Holt, Power Transmission Distributors Association
